

# Introducing Dynatrace

---

Dynatrace Training Module

# The cloud is underpinning the digital transformation

## All Software

Applications  
Infrastructure  
Network

## Dynamic

Cloud native is now  
the norm  
  
Container  
proliferation

## Web Scale

Multi-Cloud  
  
Hybrid  
  
Shift of the entire  
datacenter

## Integrated DevOps

Release per  
quarter  
  
Release per hour

## High User Expectations

Drive loyalty &  
brand outcomes

## Alternative approaches don't address today's challenges

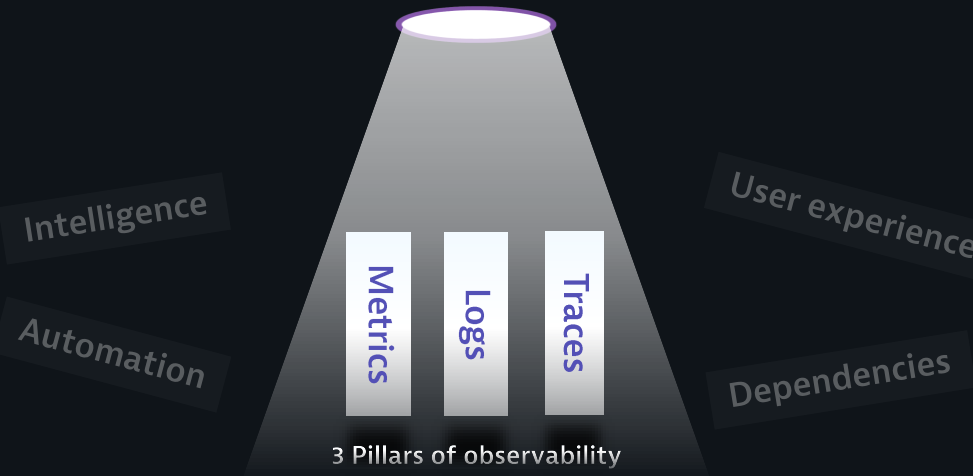

### Legacy monitoring tools

The diagram illustrates legacy monitoring tools as a collection of scattered, disconnected blocks. These blocks are labeled: Synthetics, Databases, APM, Network, Server infrastructure, Logs, and Event mgt. They are arranged in a way that suggests a lack of integration and a fragmented view of the system.

- Tool sprawl
- Doesn't work in modern environments
- Alert storms

### Observability only

The diagram illustrates observability as a unified structure. It features a central funnel shape with three vertical pillars inside, labeled Metrics, Logs, and Traces. Below the pillars is the text "3 Pillars of observability". Surrounding the funnel are several other blocks: Intelligence, Automation, User experience, and Dependencies. This suggests a more integrated and holistic approach to monitoring.

- Separate silos with missing pieces
- Works in modern environments
- DIY

Same old problems

## Criteria for a new approach

### Advanced observability

Yes, metrics, logs and traces. But you need much more...

### Continuous automation

Save time, money and resources

### AI-assistance

Shift team focus to value-added tasks

- Proactive action
- Innovation
- Outcomes

### Cross-team collaboration

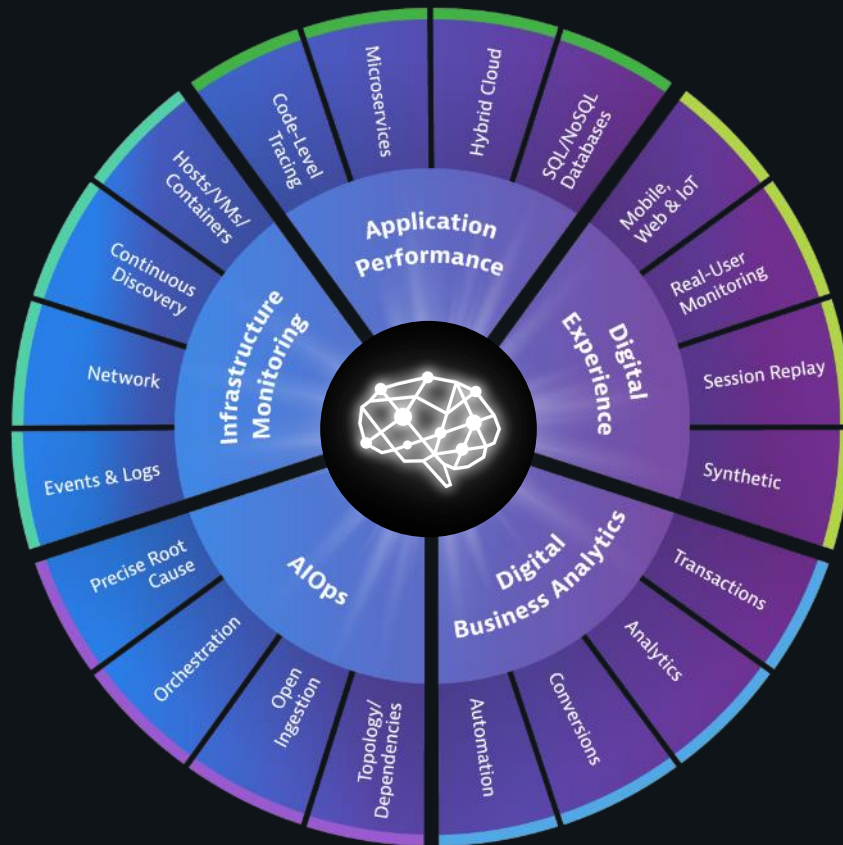

Eliminate silos and accelerate teamwork

### User experience & business analytics

Assure your entire delivery chain is providing the results you expect

# The Dynatrace software intelligence platform

**All-in-one platform**  
**A single source of truth**

**Advanced observability**

**Continuous automation**

**AI-assistance**

**Cross-team collaboration**

**Digital experience & business analytics**

**Meets all requirements for transformation**

# Advanced observability with continuous automation and AI-assistance

## Davis

Explainable AI engine, for automatic answers, insights, actions

## OneAgent

Automatic, full-stack data capture for dynamic cloud environments

## Smartscape + PurePath

End-to-end dependency mapping and deep tracing for real time, precise context

topology

code

traces

metrics

logs

behavior

metadata

## All-in-one platform

Multiple use cases across teams  
with one common data set

Precise answers and insights

Causation - not correlation

No alert storms

## Completely automated

Auto deploy with a single agent

Discovery and mapping

Automated problem detection

Precise root cause explained

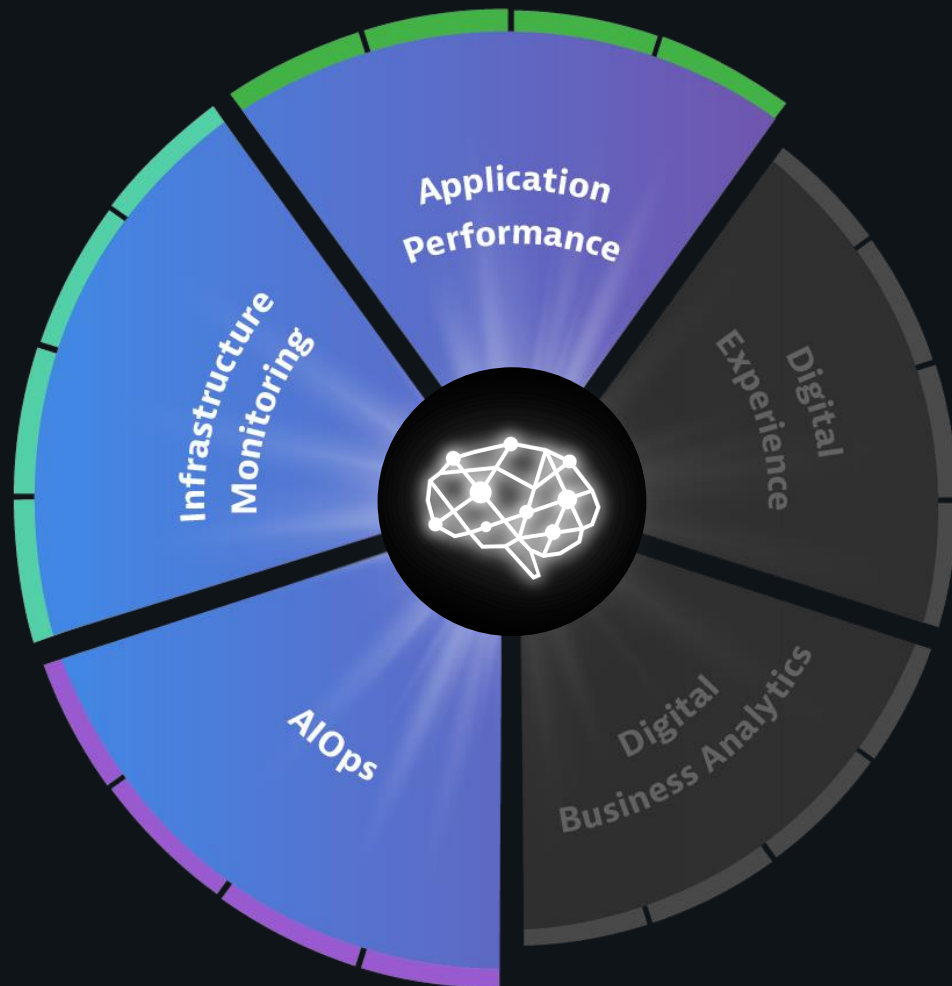

Prioritized by business impact

No-touch upgrades

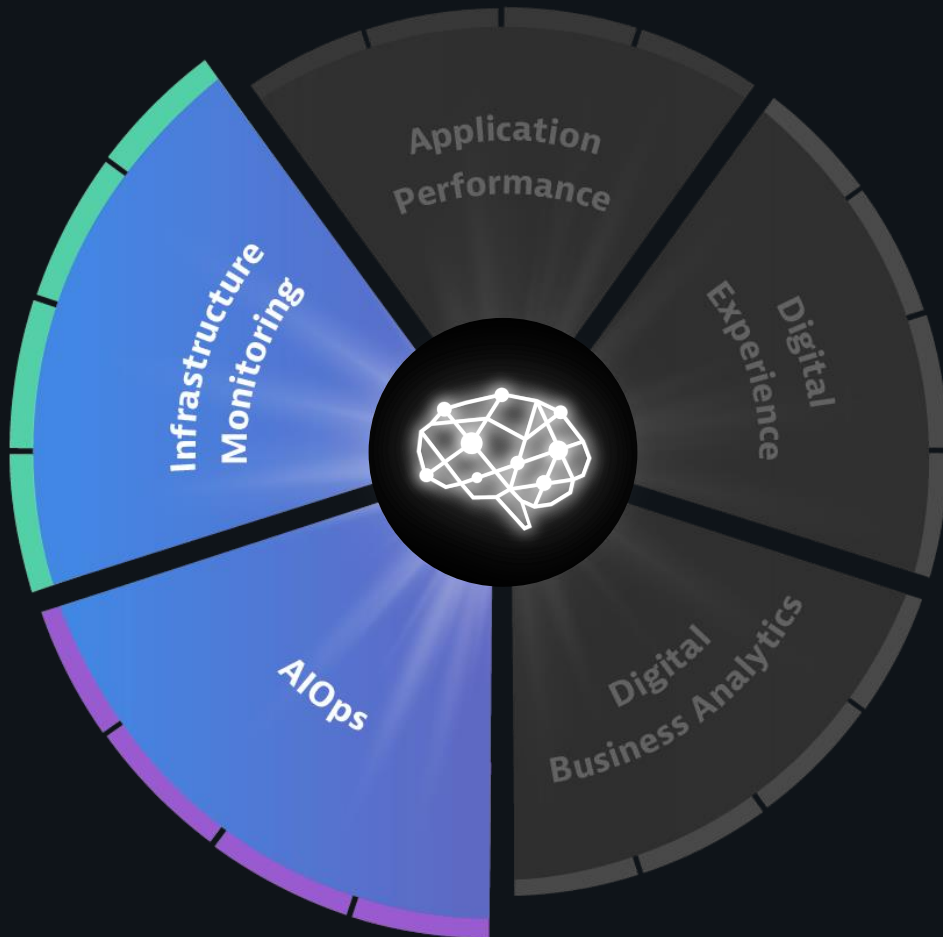

# Intelligent application performance monitoring

- Deepest APM observability at scale
- Designed for both Dev/QA and production
- Extended value with AI-assistance and continuous automation
- Answer-centric drives better business outcomes

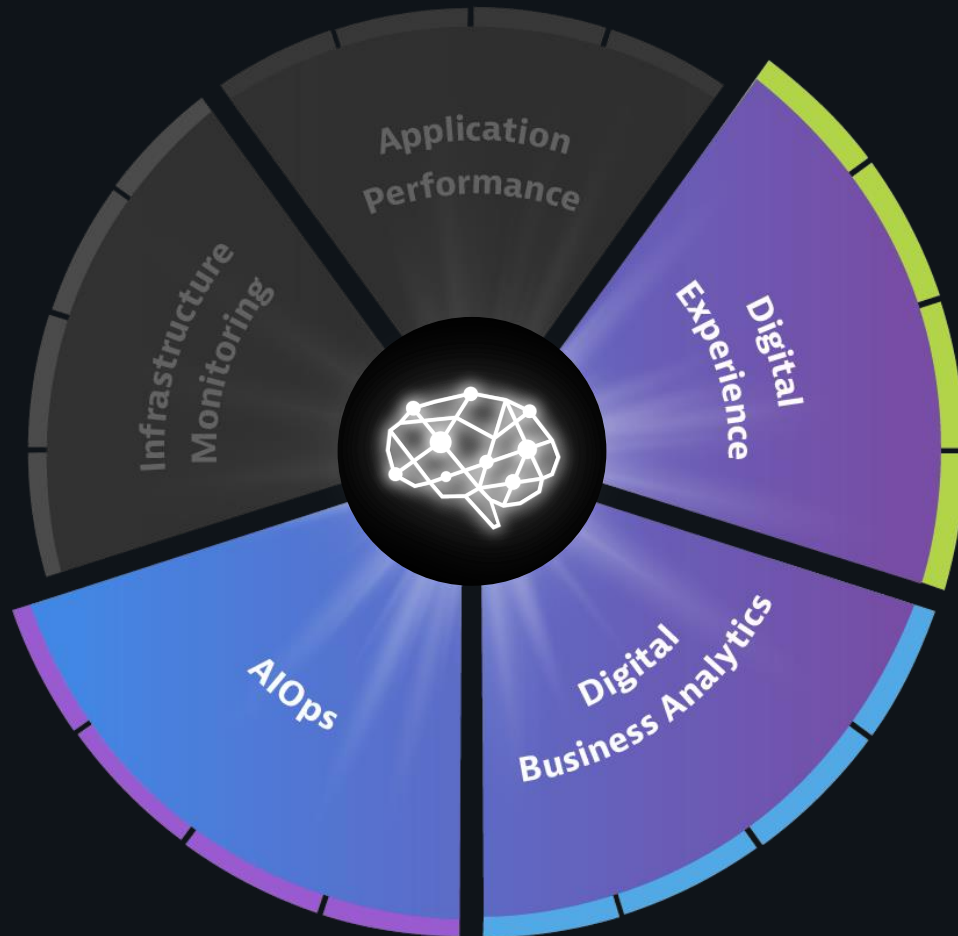

# Intelligent infrastructure monitoring

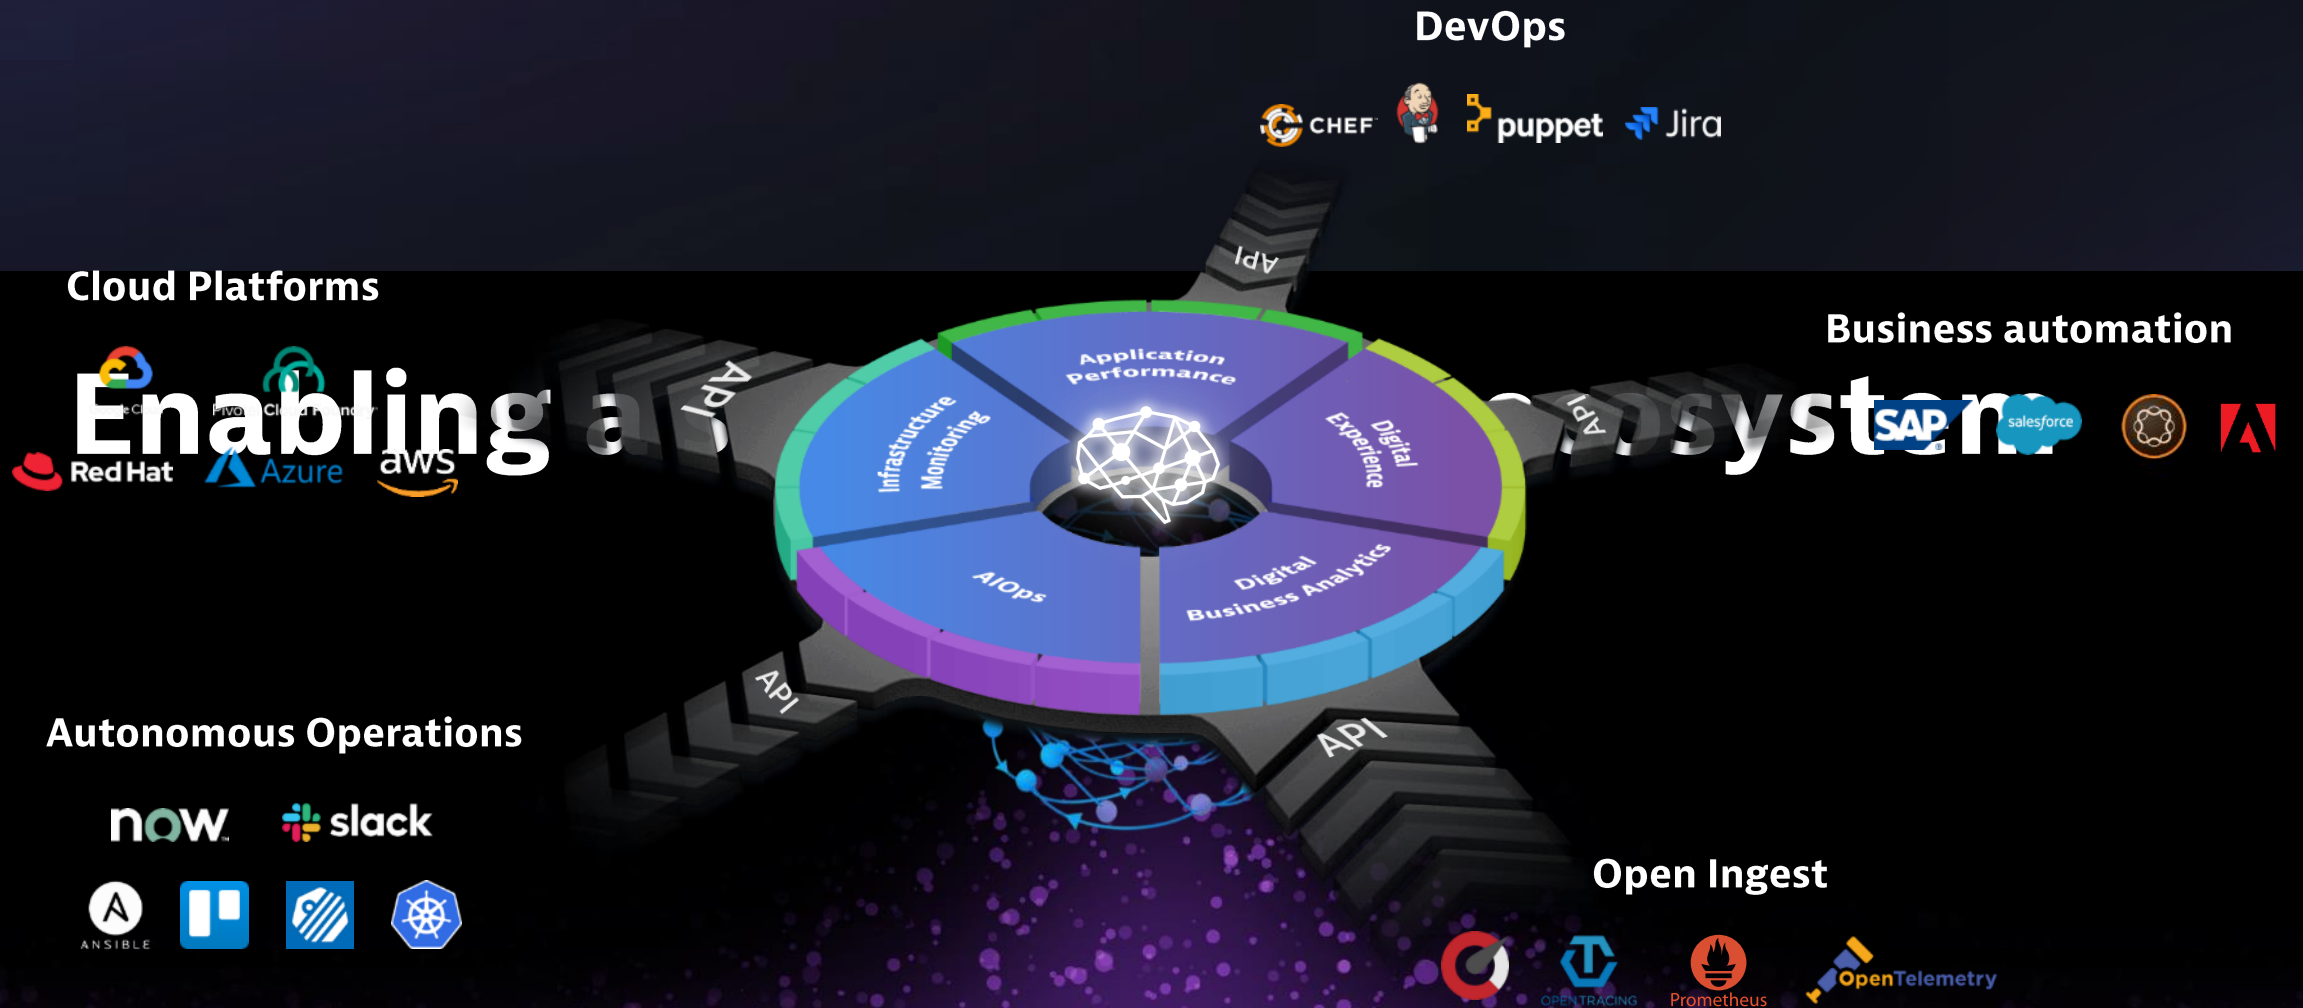

- Infrastructure monitoring with AIOps built-in
- Server, logs, network and container observability plus custom metrics
- Uses the same OneAgent as full-stack APM
- Simplifies operations to save time, money and resources

# Intelligent digital experience & digital business analytics

- Extends platform value to digital business
- Optimize user experience across channels
- Outside-in understanding of how entire cloud stack is delivering expected outcomes
- Automatically surfaces answers & insights

# All-in-one software intelligence platform

## Costly, do-it-yourself approach...

## Automatic, all-in-one approach...

- Simplicity
- Speed
- Efficiency

---

Simply smarter clouds
